

PRESS RELEASE

7-31-2012

Idaho North Resources expands land position with signing of lease on the Eagleville Gold/Silver Property, Mineral County, Nevada.

Idaho North Resources is pleased to announce that it has signed an Exploration and Mining Lease and Option to Purchase Agreement with Lane A. Griffin & Associates and Mountain Gold Exploration, Inc. for the Eagleville Gold/Silver Property located in Mineral County, Nevada.

The Eagleville property is approximately 55-miles southeast of Fallon, NV, along the north flank of the Big Kasock Mountains and lies 8-miles east-northeast of Kennecott's multi-million ounce Rawhide gold-silver mine. The project area is situated in the eastern portion of the Rawhide Mining District along the main northeastern bounding structure of the Walker Lane Structural Belt.

Approximately 15-million ounces of gold and silver equivalent has been produced or contained along this main structural zone. The Eagleville Property has 58 contiguous unpatented lode claims (1160 acres) located within the jurisdiction of the BLM lands. Two types of precious metal systems have been identified on the project, an early northeast trending silver-lead-barite vein zones that is cut by at least three later northwest striking gold-silver quartz veins. The three veins, Golden Gate Vein, the Eagle Vein and the Summit Vein occupy an area 200-500 feet wide by 2,000 feet across the western portion of Eagle Hill. The gold is found primarily in the free-state as sub-millimeter grains with minor sulfides and iron oxides. Up to 9 oz./ton gold and 30 oz./silver have been identified from rock chip samples of the veins which substantiate the high grade samples noted in historical records.

Recent core and reverse circulation drilling intercepted several zones of gold and silver mineralization which include 40 feet of 0.021 opt Au, 52.5 feet of 0.019 opt Au, 10 feet of 0.056 opt Au and 1.3 feet of 1.13 opt Au and 0.5 opt Ag. At the property, several mining companies (Echo Bay, Romarco, Terraco, Nevoro, Golden Predator) have conducted exploration on the Eagleville project. Geologic,

geophysical and assay data has been gathered but no one company has complied and interpreted this information to develop an exploration strategy.

“I am very pleased to have added the Eagleville project to our land holdings and look forward to advancing the project into development stage for possible underground mining operation and exploring the open pit potential “said Mark A. Fralich, President of Idaho North Resources.

The Eagleville property contains several untested gold-silver targets that include both underground and open pit, bulk minable, disseminated deposit targets. The property has excellent potential to discover a world class gold-silver deposit.

About Idaho North Resources

Idaho North Resources is a U.S. based junior mining company involved in exploring for and developing gold, silver and base metal resources in Idaho and Nevada. The Company has a portfolio of silver/gold mineral properties near Tonopah, in Esmeralda county, Nevada, and a gold/silver property south of Fallon, in Mineral county, Nevada. The Company’s stock is privately held and does not currently trade on any public market or exchange.
