

## IDAHO NORTH RESOURCES ANNOUNCES RESULTS FROM DRILLING AT THE KLONDYKE PROPERTY, ESMERALDA COUNTY, NEVADA

April 10, 2017

Idaho North Resources (OTC:IDAH) (“IDAH” or the “Company”) in conjunction with a wholly owned subsidiary of Coeur Mining, Inc. (NYSE:CDE, “Coeur”) today announced the results of the drill program at the Klondyke property in Esmeralda County, Nevada. The Klondyke property is located approximately 10 miles south of the historic silver district of Tonopah, Nevada within the prolific Walker Lane Structural Zone.

The drilling was conducted as part of the Exploration Earn-in Agreement with Coeur, under which Coeur has funded, and had exclusive earn-in rights to certain Company properties such as the Klondyke claims. (For more details, please see the IDAH press release dated October 2, 2014 at [www.idahonorthresources.com](http://www.idahonorthresources.com).)

The 23-hole, 6,775-foot reverse-circulation drill program included 3,210 feet in the Klondyke North target area, 2,365 feet in the Klondyke Main Mining target area, and 1,200 feet in the Klondyke Peak target area. Sixteen drill holes contained anomalous gold and silver mineralization, in addition to thick horizons of lead and zinc and other associated geochemical pathfinder elements. The more significant silver drill hole intercepts are included in the table below. All holes were drilled vertically except KD-3 which was at a 45 degree inclination. All intervals are approximations.

Idaho North Resources President Lane Griffin stated, “The drill results demonstrate widespread mineralization throughout the property that occurs at the surface and is open ended at depth. The recently assembled drill hole database, along with on-going geologic mapping and geochemical sampling is currently being interpreted, which should lead us to new targets that have even more robust grades and thicknesses.

### Klondyke Property, significant drill holes and silver (“Ag”) intervals (all lengths in feet)

Hole #	Depth	From	To	Interval	Silver (*ppm)	Ag (**opt)	Remarks
<b>KD-3</b>	385	10	30	20	57.2	<b>1.69</b>	*anomalous gold (“Au”)
		20	25	5	129.5	<b>3.78</b>	anomalous Au
		0	11 5	115			*anomalous Ag
		205	31 0	105			anomalous Ag
<b>KD-4</b>	250	60	85	25	36.9	<b>1.08</b>	anomalous Au
		65	70	5	56.9	<b>1.66</b>	anomalous Au
		0	14 0				anomalous Ag

<b>KD-10</b>	450	0	10	10	48.8	<b>1.42</b>	anomalous Au
		5	10	5	74.6	<b>2.18</b>	anomalous Au
		25	30	5	21.2	<b>0.62</b>	
		0	10	105			anomalous Ag
		5					
<b>KD-14</b>	200	35	85	50	7.85	<b>0.23</b>	anomalous Au
		45	50	5	43.4	<b>1.27</b>	anomalous Au
<b>KD-16</b>	150	0	45	45	22.8	<b>0.66</b>	anomalous Au
		0	5	5	172	<b>5.02</b>	
		25	30	5	61.9	<b>1.81</b>	anomalous Au
<b>KD-20</b>	300	105	13	25	35.3	<b>1.03</b>	anomalous Au
		0					
		110	11	5	133.9	<b>3.9</b>	
		5					

\* anomalous Au refers to greater than 10 ppb (parts per billion)

\* anomalous Ag refers to greater than 1 ppm (parts per million)

\*\* ounces per ton

Associated with the silver-gold mineralization are thick (up to 100 feet) intercepts of highly anomalous lead, zinc, copper and other pathfinder elements. These intercepts will be modeled to check the likelihood that they indicate distal or nearby concealed Ag-Au mineralization and can be used to help plan a second drill phase in pursuit of discovering a buried ore deposit. A property map with drill hole locations is included as a separate attachment.

Inspectorate Lab in Reno, Nevada performed the gold and silver analyses by fire assay and ICP analysis for 33 additional elements. All drill samples were collected following standard industry practice. QA/QC included the insertion of numerous standards and blanks into the sample stream. All samples were bagged and documented by qualified representatives of the Company. A secure chain of custody was maintained from drill site to delivery at the assay lab. This accountability was maintained during all subsequent testing and analysis.

Coeur has determined that the Klondyke property does not demonstrate the type of mineralization that fits their exploration target size criteria and will no longer participate in advancing the property. The formal exploration alliance between the two companies has lapsed in March and has not been renewed.

Idaho North Resources and Coeur will continue to work together in a more informal manner so that the Company can continue to bring attractive properties or opportunities to Coeur for further evaluation using the alliance as a template for funding and exploring these properties.

The Klondyke property remains an attractive silver prospect and we will advance the property with continued exploration.

## **ABOUT IDAHO NORTH RESOURCES**

Idaho North Resources is a U.S. based junior company exploring for gold, silver, and alternative energy sources. The Company had an Exploration Program Agreement with Coeur which Coeur would fund, and have exclusive earn-in rights to certain of the Company's properties. IDAH continues to work with Coeur to identify silver prospects within Nevada's historically productive mining districts. The Company also has a 50/50 business alliance agreement with the Lithium Corporation for the acquisition of Lithium properties in the state of Nevada. In addition, the Company has also optioned the high-grade Lone Jack Gold Mine property in northeastern Washington.

## **ABOUT COEUR**

Coeur Mining is a well-diversified, growing precious metals producer with five precious metals mines in the Americas employing approximately 2,000 people. Coeur produces from its wholly-owned operations: the Palmarejo silver-gold complex in Mexico, the Rochester silver-gold mine in Nevada, the Kensington gold mine in Alaska, the Wharf gold mine in South Dakota, and the San Bartolomé silver mine in Bolivia. The Company also has a non-operating interest in the Endeavor mine in Australia. In addition, the Company owns the La Preciosa project in Mexico, a silver-gold exploration stage project. Coeur conducts exploration activities throughout North and South America.

## **Cautionary Statement**

Except for the historical information contained herein, certain matters discussed in this press release are forward-looking statements which involve risks and uncertainties. These forward-looking statements are based on expectations and assumptions as of the date of this press release and are subject to numerous risks and uncertainties which could cause actual results to differ materially from those described in the forward-looking statements. Forward-looking statements can be identified by, among other things, the use of forward-looking language, such as the words "plan," "believe," "expect," "anticipate," "intend," "estimate," "project," "may," "will," "would," "could," "should," "seeks," or "scheduled to," or other similar words, or the negative of these terms or other variations of these terms or comparable or similar language, or by discussion of strategy or intentions. Such forward-looking statements include, without limitation, statements regarding future business strategy, plans and goals and other statements that are not historical facts. Forward-looking statements address activities, events or developments that the Company expects or anticipates will or may occur in the future, and are based on current expectations and assumptions. Although management believes that its expectations are based on reasonable assumptions, it can give no assurance that these expectations will prove correct. The Company does not intend to publicly update any forward-looking statements, whether as a

result of new information, future events, or otherwise, except as may be required under applicable securities laws.
